The Book Library Project
Book Library: CRUD + Login / Logout

- Design and implement a "Book Library" application with Apache Cordova, jQuery Mobile and Kinvey.

- Books have title, author and description.

- Implement the following functionality:

    - Login

    - Register

    - Logout

    - List all books

    - Create a new book

    - Edit existing book

    - Delete existing book.

- Books have ownership:

    - Anyone can view all the books.

    - Only the book creator can edit / delete his own books.

There is a sample application made by HTML and jQuery.
I hope that it will help you!
Much Love <3
